

1 **WHAT IS CLAIMED IS:**

2 1. A rotatable shunting socket housing for telecommunication devices
3 comprising:

4 a body having two sockets respectively defined at two opposite sides of
5 the body, each socket having a plurality of metal feet provided in the sockets;

6 a cover mounted on a side of the body between the sockets ; and

7 a connector rotatably mounted on the cover, the connector having a plug
8 provided at an exterior side of the connector and perpendicular to the sockets and
9 electrically connected with the metal feet.

10 2. The rotatable shunting socket housing as claimed in claim 1, wherein
11 the cover has a circular opening defined through an upright side between the
12 sockets, and the connector has a ring formed at an interior side of the connector
13 and rotatably received in the circular opening.

14 3. The rotatable shunting socket housing as claimed in claim 2, wherein
15 the cover has two stops formed at diametrically opposite sides of the circular
16 opening, and the connector has a protrusion formed on a circumference of the
17 ring and located between the stops.

18 4. The rotatable shunting socket housing as claimed in claim 3, wherein
19 the cover further has two recesses respectively defined above the stops, and the
20 protrusion further has a lug formed at a side facing the recesses for being
21 positioned in the corresponding recess when the protrusion abuts one of the
22 stops.

23 5. The shunting socket housing as claimed in claim 1, wherein the body
24 has a plurality of slots defined through an upper side and a lower side of the body

- 1 and between the sockets, and the cover has a plurality of tongues formed at an
- 2 upper side and a lower side of the cover and positioned in the respective slots to
- 3 fasten the cover on the body.
